

EXAMPLE:

15. Evaluation

The Technology Planning Committee will annually review the technology plan and purchases for that year. The committee will make necessary revisions and make suggestions to the district's school board of any technology areas that need to be addressed. Our districts does not require the district board of educations approval although we do keep the board informed on all areas of our technology plan.

We will also use the results of the teacher, staff, student, parent and alumni survey to monitor our progress on staying current with hardware and software. Surveying past graduates will keep us informed and be used as an evaluation of our plan on student performance in the areas of preparing them for college needs or job market requirements.

Our plan, has been formulated to be a workable document, therefore we feel the following areas need to be check marked annually:

Inventory	on an annual basis the technology coordinator will update the room by room inventory of district hardware. Based on school need for teacher requests hardware upgrades can be assessed and implemented.
Infrastructure	given the states support and hardware provisions for the school, changes and upgrades to infrastructure can be examined on the basis of changing technology as well as needs.
Needs Assessments	as teachers and administrators update their training and abilities, new additions to the technology committee can offer new insights and observations to classroom needs and improvement.
Goals and Objectives	on an annual basis the technology committee will examine whether district goals and objectives have been met and the need for new or modified action plans.
Vision	with the speed of change in technology, software and knowledge of the school's vision statement can be weighed in light of changing technology and student needs.
Professional Development	as a new staff member enters the district and existing Staff members seek new solutions and challenges for students, the technology Committee will need to examine other training options for teachers and administration.
Curriculum Integration Action Plan	curriculum integration needs to be examined on an annual Basis as course offerings change and student competencies increase
Student Performance	needs to be read and evaluated annually to find those areas that have been met and to identify new areas that require an updated action plan. will be examined as test scores are evaluated. We will search for a tool to provide us with the ability to accurately evaluate student performance.
